the purpose of this book is to make the reader familiar with software engineering for distributed systems software engineering is a valuable discipline in the development of software the reader has surely heard of software systems completed months or years later than scheduled with huge cost overruns systems which on completion did not provide the performance promised and systems so catastrophic that they had to be abandoned without ever doing any useful work software engineering is the discipline of creating and maintaining software when used in conjunction with more general methods for effective management its use does reduce the incidence of horrors mentioned above the book gives a good impression of software engineering particularly for distributed systems it emphasises the relationship between software life cycles methods tools and project management and how these constitute the framework of an open software engineering environment especially in the development of distributed software systems there is no closed software engineering environment which can encompass the full range of software missions just as no single flight plan airplane or pilot can perform all aviation missions there are some common activities in software engineering which must be addressed independent of the applied life cycle or methodology different life cycles methods related tools and project management approaches should fit in such a software engineering framework

business to business b2b integration is a buzzword which has been used a lot in recent years with a variety of meanings starting with a clear technical definition of this term and its relation to topics like a2a application to application asp application service provider a2a and b2c business to consumer christoph bussler outlines a complete and consistent b2b integration architecture based on a coherent conceptual model he shows that b2b integration not only requires the exchange of business events between distributed trading partners across networks like the internet but also demands

back end application integration within business processes and thus goes far beyond traditional approaches to enterprise application integration approaches his detailed presentation describes how b2b integration standards like rosettanet or swift the application integration standard j2ee connector architecture and basic standards like xml act together in order to enable business process integration the book is the first of its kind that discusses b2b concepts and architectures independent of specific and short term industrial or academic approaches and thus provides solid and long lasting knowledge for researchers students and professionals interested in the field of b2b integration
